

## Li and Heroux's observations about cancer

Cancer appears as abnormal chromosome number in mitochondria. Irradiation with 60 Gz magnetic field with strength above 25 nT leads to a reduction of the number of chromosomes to normal. It seems that cancer is cured.

TGD provides a possible model for the findings (<http://tinyurl.com/y9mr9s2w>).

1. Hint: **60 Hz is one of the Schumann frequencies** seen in em spectrum of Earth. Could Schumann frequency be essential. It could be related to an analogy of EEG realized as dark photons.

! 60 Hz frequency could be essential for either **communication with or control by MB of Earth**. Also for communications between cell could and some "personal" MB having layers with the size of Earth using this frequency might be involved.

2. The **model of water memory** suggests an explanation. If the dark flux tubes connecting water molecules act as **quantum antennas** sending and receiving radiation, cancer could be seen as being due to the **lack of the flux tubes with this cyclotron frequency**. The irradiation of water by 60 Hz 25 nT magnetic field would stimulate water to mimic this frequency by generating the required flux tubes and the communications with appropriate MB would be established. Mechanism would be essentially that of water memory and homeopathy.

Quite generally, cancer and various diseases could be seen as disorders in communications to and control by MB due to the missing flux tube antennas. Irradiation might lead to their regeneration and healing.
